

BitTrace14 TraceCube Server

Connect to and manage your TraceCube network.

Traceability
 Add data collection for traceability to any line without changing your machines. Integrates seamlessly into existing SMEMA and data interfaces.
 Add data collection to manual workstations without requiring a PC for each employee.

Integrates to your local MES/ERP solution.

- Track Products
- Track machine performance
- Enforce process sequences
- Enforce process step times
- Enforce operator rights
- Provide work instruction

The TraceCube Server application forms a key part of the TraceCube system, it contains the core workflow and device management functionality. All terminals are managed and configured from the server: which workflow is assigned to it, parameters for attached scanners and other hardware, etc. The server provides a plug-in mechanism to allow customer specific workflows to be implemented in an individual manner. The connection to the customer-specific MES or ERP system is also implemented via a plug-in mechanism. The TraceCube Server provides the benefits of standardized software together with the flexibility of a customized solution.
